

Rejuvenate Your Skin From the Inside Out

Focus Dual Fusion™ is an advanced treatment protocol performed using the Focus Dual device. It's not your average facial – this game-changing approach rebuilds and restores each layer of the skin.

By combining two proven, industry-leading technologies – HIFU and RF Microneedling – this professional skin protocol is designed to lift, firm, smooth and rejuvenate the skin from within.

Dual Technology, Double Results

Fast treatment time

Virtually pain-free

Non-invasive

Virtually no downtime

Suitable for Fitzpatrick I-IV

What Makes Focus Dual Fusion™ Different?

When it comes to lifting, tightening and textural transformation, Focus Dual Fusion™ goes further.

Focus Dual Fusion™ is a carefully sequenced protocol treatment that combines two powerful technologies – HIFU and RF Microneedling – to lift, tighten and smooth the skin at multiple depths.

HIFU (High Intensity Focused Ultrasound) targets the deeper layers, including the SMAS, to lift and firm from within. RF Microneedling (RadioFrequency Microneedling) then works on the upper layers, refining texture and boosting collagen for smoother, tighter-looking skin.

Results you'll love,
by scientists you trust

Proven Results

2 Treatments | Courtesy of Alisha Louise Aesthetics

- Visibly firms loose skin
- Softens fine lines and smooths texture
- Minimise pores
- Improve skin tone
- Stimulates collagen

FAQs

Q: How many sessions will I need?

A: Most clients see best results after a course of 1–3 treatments, spaced around 12 weeks apart. Your practitioner will tailor a plan based on your skin goals.

Q: When will I notice a difference?

A: A refreshed glow may appear within days, but deeper lifting and firming effects develop gradually as collagen renews – often peaking around 2–3 months after treatment.

Q: Does the treatment hurt?

A: You may feel warmth or a prickling sensation. Some clients describe mild discomfort, but it's temporary and easily managed.

Q: How long is each session?

A: A typical treatment takes 60–90 minutes depending on the area – making it an efficient option for people wanting impactful results without disruption.

Q: How long do the results last?

A: Because the treatment stimulates your skin's own repair processes, results can last for many months. With good skincare and occasional maintenance, you'll enjoy longer-term benefits than injectables can offer.
